

## Legend

Cells from mice 16h after cecal injection  
Two panels run with same cell isolations

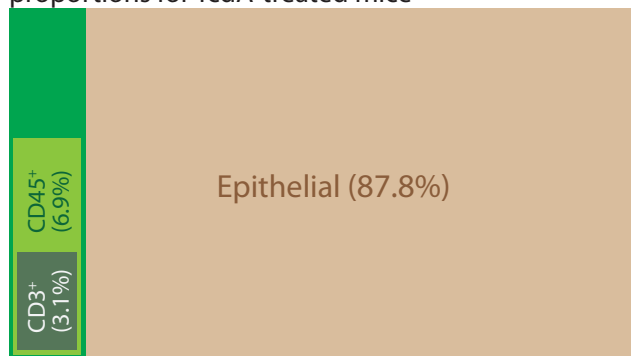

Colors distinguish experimental conditions

Each shape (◆, ▲, ●) corresponds to the same mouse in each experimental condition across cell markers

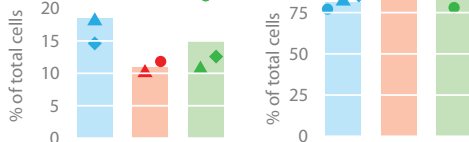

Visual representation of average cell type proportions for TcdA-treated mice

Nonepithelial (12.2%)

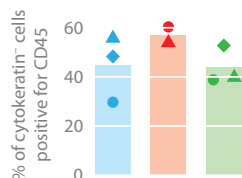

Cell group (% of total cells)

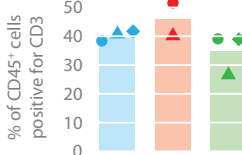

## Panel 1

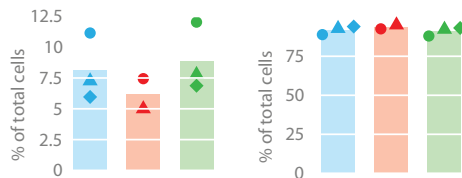

Subset of nonepithelial

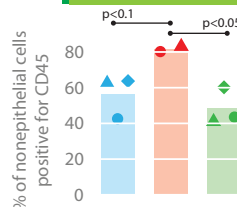

Subset of CD45+

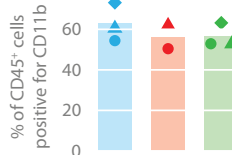

## Panel 2

Subset of nonepithelial

Subset of CD45+

Subset of CD45+
